2024-2027
Moving Forward

Continued delivery in Q3

- ✓ Expansion of offerings for ultra-high-net-worth individuals and family offices
- ✓ Aquila Capital with strong sales start of first fund “AC One Planet” European long-term investment fund
- ✓ Portfolio growth in Green Infrastructure Finance already exceeds record year 2023
- ✓ Client self-onboarding on eFX platform allows new users to easily and quickly start trading
- ✓ New “IT factory” in Malaysia successfully launched

Cornerstones for development of upgraded strategy

Optimise capital allocation and RWA efficiency to invest in **capital accretive growth**

Improve the **risk/return profile** in all product areas in both credit and capital markets businesses

Increase **cost efficiency** and introduce additional cost measures to further strengthen CIR and increase net RoTE

Q3 Revenues maintained on high level – up 1.2% vs 9M 23

Net interest income (NII) 5.5% lower YoY in line with development of interest rates partially offset by volumes

Net commission income (NCI) up 7.6% YoY mainly due to better securities business and increased activity level of corporate clients

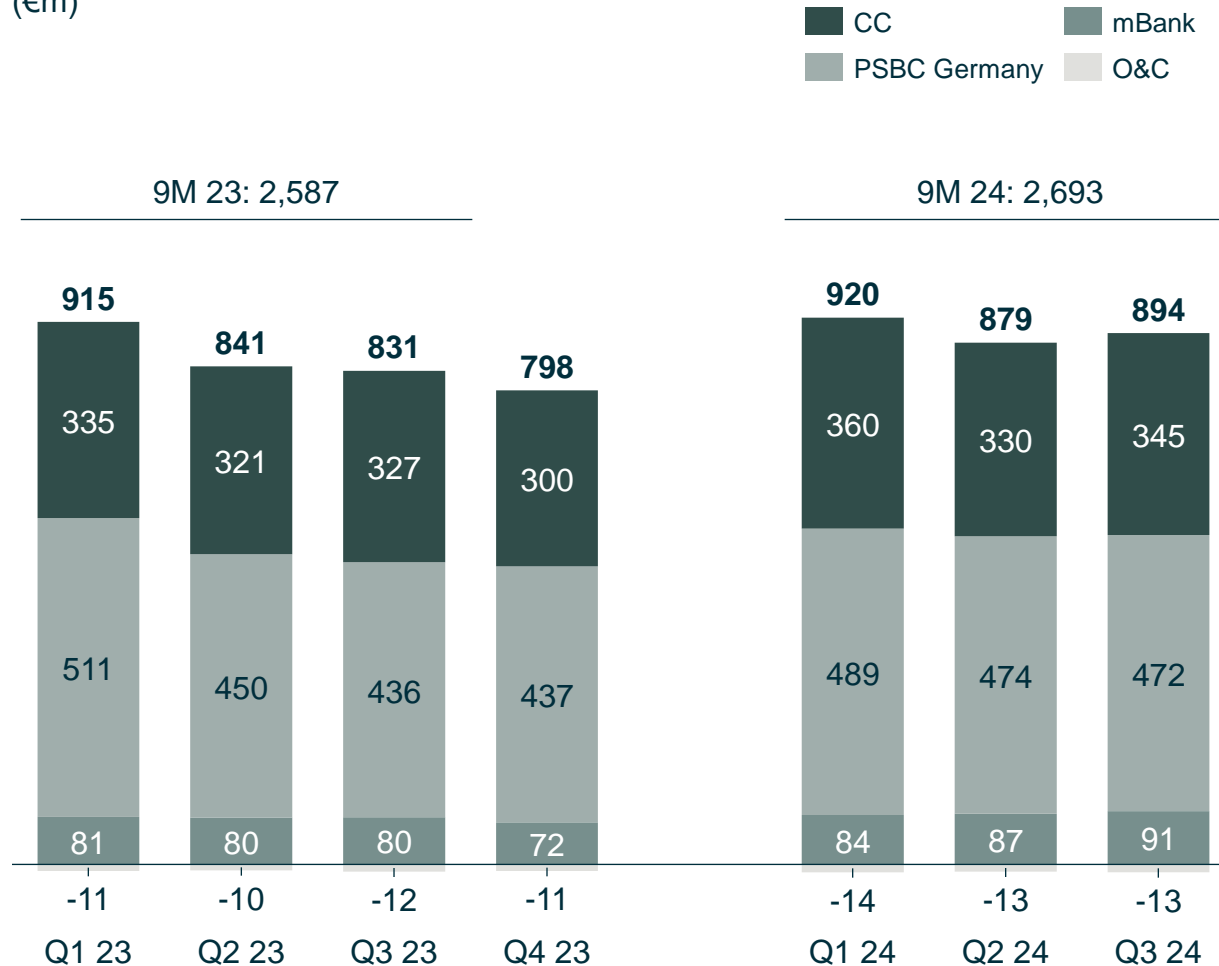

Net fair value result (NFV) lower QoQ driven by FX valuation effect of USD AT1

Other income excluding provisions for FX loans improved – Q2 was burdened by Russia related provisions

Q3 with 7.6% YoY growth in commission income

Net commission income (€m)

YtD NCI up 4.1% with significantly improved revenue dynamic

Corporate Clients (CC) increased NCI +4.4% QoQ with higher contribution from transaction banking, lending and FX trading more than compensating seasonally weaker bond business

Private and Small-Business Customers Germany (PSBC Germany) maintained NCI on same level QoQ with stable securities and payments business – up 8.3% YoY mainly due to better securities business, including acquisition of Aquila Capital

mBank benefits among other effects from better cards business QoQ

Broad-based YoY growth of NCI

Net commission income Corporate Clients
(€m)

Net commission income PSBC Germany
(€m)

Corporate Clients

Trade finance with YoY good growth despite sluggish German economy

In Capital Markets YoY growth from syndication and FX businesses

Private and Small-Business Customers Germany

YoY increased securities revenues due to volume growth and higher number of transactions as well as contribution from Aquila Capital

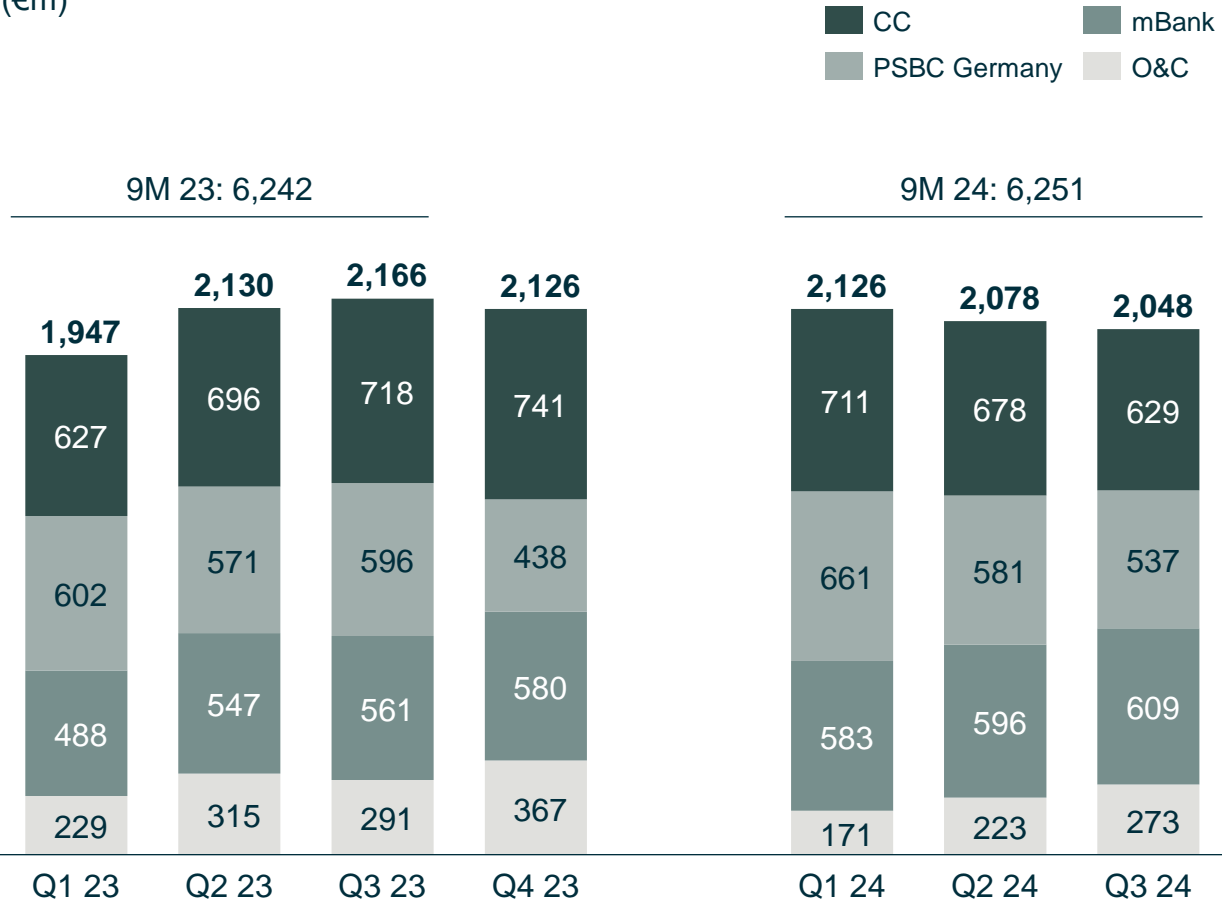

QoQ lower securities revenues due to less fees at Commerz Real

QoQ securities volume up €4bn mainly due to market performance – net new money inflows offset by outflows due to closure of onvista bank

Resilient NII despite lower ECB rates

Net interest income (€m)

YtD NII on same level as last year

Corporate Clients (CC) with QoQ lower NII contribution from deposits due to reduced ECB rates and increasing deposit beta at slightly lower volumes in current accounts

Private and Small-Business Customers Germany (PSBC Germany) with QoQ lower NII in line with reduced ECB rates at stable volumes

mBank with higher NII QoQ based on continued effective management of customer deposits and loan growth

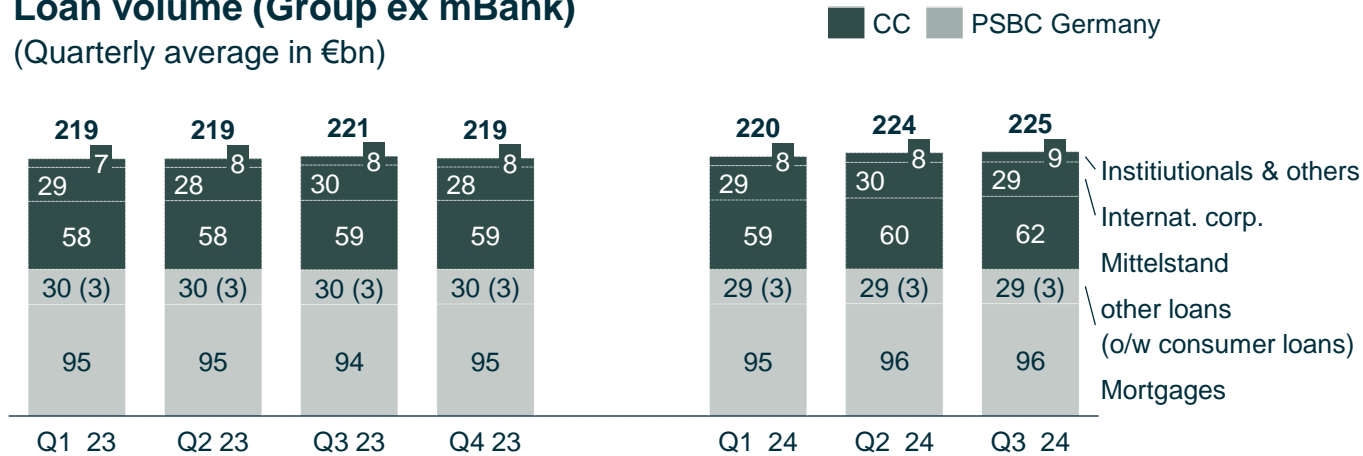

Others & Consolidation (O&C) with higher NII QoQ mainly technically driven (day-count effects and consolidation items)

Loan growth in Mittelstand

Loan volume (Group ex mBank)

(Quarterly average in €bn)

CC with continued loan volume growth in Mittelstand despite low economic growth in home market

CC loan book reached €100bn

German mortgage business stable

Deposit volume (Group ex mBank)

(Quarterly average in €bn)

CC with ongoing trend of corporates shifting from sight deposits to interest bearing products

PSBC with still growing deposit volumes despite lower rates offered on call deposits

Beta stabilized at around 40%

2024 NII outlook increased from ~€8.1bn to ~€8.2bn

Expected development of NII (€bn)

Expected offsetting NFV vs 2024¹ (€bn)

ECB deposit rates

Average ECB deposit rate expected at 3.8% in 2024 and in range 2.1% - 2.8% in 2025 (~€30m annualised sensitivity to +/-10bp in ECB rate)

Lower NII due to rates development expected to be largely offset by higher NFV

Deposit and loan volumes

Volumes stable in Q3 – in 2025 expected to be slightly higher and contributing ~€100m

Deposit beta²

Q3 average deposit beta in Germany at ~40% reflecting mix shift in CC – average beta for 2024 expected at ~39% – in 2025 beta expected at same level (~€80m annualised sensitivity to +/-1pp beta change)

Replication portfolio

Deposit replication portfolio at €133bn; replication portfolios expected to contribute additional ~€200m in 2025 and a further €500 - €600m until 2027

mBank

NII 2025 expected €200m - €300m below 2024, but partly offset by higher NFV

Outlook 2027

Confirmed at ~€8.4bn based on benefits from replication portfolio and expected growth in deposit and loan volumes as well as NII growth at mBank

1) Change in net fair value result due to assumed changes in interest rate levels in EUR and PLN

2) Deposit beta is the average interest pass-through rate to customers across interest bearing and non-interest bearing deposit products based on ECB deposit rate

Continued strict cost control

Costs (€m)

Total Group costs below last year due to lower compulsory contribution

Operating expenses for Group ex mBank slightly higher than last year because of general salary increases, higher accruals for equity-based variable compensation and acquisition of Aquila Capital in June. These increases were partially offset by active cost management

Operating expenses for mBank rose as a result of investments in business growth and FX effects

Decreasing European bank levy in 2024 due to suspended contribution to Single Resolution Fund as target volume has been reached

In 2024 we expect total expenses of ~€6.5bn which are the basis of our target CIR of ~60%. This includes a cost increase in Q4 due to further IT investments, ongoing growth in mBank and a final inflation compensation payment to employees

Risk result incl. -€97m collective provision for ESG risks

Risk result (€m)

Around -€130m of overall -€255m risk result related to 3 larger single cases

Risk result includes around -€147m from methodology updates including introduction of collective staging to cover climate and environment risks that resulted in €16bn increase of stage 2 exposure and -€97m risk result

Partially offset by €94m TLA release due to reassessment. TLA reduction in PSBC (from €147m to €117m) and in CC (from €187m to €124m). TLA of O&C stable at €1m

Remaining €242m TLA mainly available to cover expected secondary effects from geopolitical crises and uncertainties from inflation

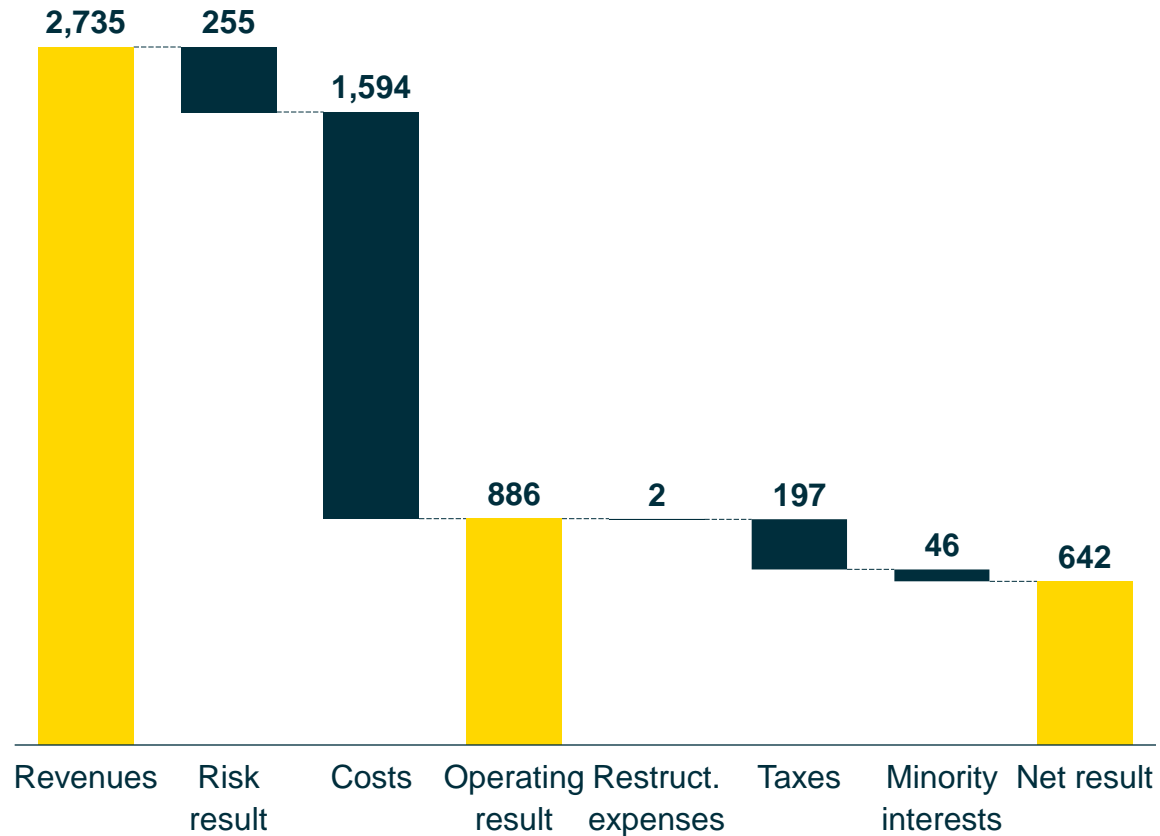

Cost of risk at low 25bp and NPE-ratio at 0.9%

NII decreased YoY due to lower ECB rates and higher deposit beta, compensated by commission income and valuation effects

YoY slight revenue growth in Private Customers. Growth in commission income more than compensating decrease in deposit business

Small-Business Customers YoY with stable commission business but lower revenues from deposits

Commerz Real with higher revenues YoY benefitting from positive valuation effects

Slightly lower customer base in Germany as a consequence of closing onvista bank and not transferring all customers

Higher costs include effect of consolidating Aquila Capital

mBank with strong underlying profitability

Volume of CHF loans before deductions at €1.3bn

Outstanding provisions for legal risk for CHF loans of €1.8bn (thereof €0.7bn for repaid loans as well as for legal fees)

So far ~€1.6bn already paid out for court cases and settlements for the FX mortgage portfolio – almost exclusively for CHF loans

The number of new court cases has more than halved in Q3 vs. Q1; In addition, the number of total pending lawsuits has begun to significantly decline due to successful settlements with customers

Lower but still significant burdens from FX loans expected in Q4

RWA development by risk types
(€bn | eop)

Transition of CET1 ratio
(%)

Credit RWA in CC lower mainly from change in counterparty risk model following regulatory approval and reduction in undrawn credit lines

Lower market risk RWA also from regulatory approval of counterparty risk model

Reduced capital due to cumulative effects, especially negative FX reserve and increased deduction from prudential valuation

Latest development

German real gross domestic product unexpectedly rose by 0.2% in the third quarter. However, the 0.2% increase was not enough to offset the decline in the second quarter. Therefore, the better description of the current situation is that the economy has been stagnating for more than two years.

The development of sentiment indicators in recent months gives little hope for a quick turnaround for the better. Although both purchasing managers' indices and the Ifo business climate index rose in October, they remain at a very low level. It is clear that the dampening effect of the rate hikes by the ECB and many other western central banks over the past two years is only slowly receding. The same applies to the adverse effects of higher energy prices.

Due to the weak economy, the number of unemployed has increased in recent months. However, unemployment remains significantly lower than for most of the past 40 years.

The inflation rate in October was 2.0%, inline with the ECB's target. However, core inflation, excluding the often highly volatile energy and food prices, is still significantly higher at 2.9%.

Outlook for 2024/2025

In view of the continued weakness of leading indicators, a revival of economic activity is not to be expected until next year. It is obviously taking longer for the economy to adjust to higher interest rates. The adjustment of construction output to the significantly lower demand in the wake of higher financing costs is not yet complete.

However, a recovery can be expected in the coming year. The burden of interest rates should gradually decrease, especially since the ECB is now lowering interest rates again. In addition, rising real wages should boost private consumption. However, a strong upturn is not to be expected. The numerous structural problems are slowing down the German economy.

The inflation rate will probably increase again somewhat in the coming months, and the core inflation rate is also likely to remain above 2% in the coming year. This is because companies will continue to pass on at least part of the massive increase in their wage costs to their customers despite the weak growth.

Since June, the ECB has already lowered its most important key interest rate, the deposit rate, by 0.75 percentage points from 4.0% to 3.25%. We are expecting the ECB rate down at 2.0% by the middle of next year, mainly because of the continued weakness of the economy.

IAS 19: Development of pension obligations

Cumulated actuarial gains and losses (€m)

In Q3 24, the relevant market rates went slightly downwards, moving the IAS19 discount rate to 3.8% in Q3 versus 3.7% at year-start. YtD the present-valued pension obligations (DBO) therefore still decreased, producing a YtD liability gain in OCI

On the same market movement, pension assets produced a slight YtD asset gain in OCI, with lower bond valuations being overcompensated by equity gains

Together, pension obligations and pension assets produced a YtD net OCI gain of +€79m (after tax) on Group level

The discount rate is derived from an AA-rated government bond basket, re-calibrated on corporate bond level, with an average duration of roughly 14 years

The funding ratio (plan assets vs. pension obligations) is 110% across all Group plans

1) OCI effect driven by development of plan assets versus pension obligations, after tax, without minorities; cumulated since 1/1/2013 (new IAS19 standard) including possible restatements

Disclaimer

This presentation contains forward-looking statements. Forward-looking statements are statements that are not historical facts; they include, inter alia, statements about Commerzbank's beliefs and expectations and the assumptions underlying them. These statements are based on plans, estimates, projections and targets as they are currently available to the management of Commerzbank. Forward-looking statements therefore speak only as of the date they are made, and Commerzbank undertakes no obligation to update any of them in light of new information or future events. By their very nature, forward-looking statements involve risks and uncertainties. A number of important factors could therefore cause actual results to differ materially from those contained in any forward-looking statement. Such factors include, among others, the conditions in the financial markets in Germany, in Europe, in the United States and elsewhere from which Commerzbank derives a substantial portion of its revenues and in which it holds a substantial portion of its assets, the development of asset prices and market volatility, potential defaults of borrowers or trading counterparties, the implementation of its strategic initiatives and the reliability of its risk management policies.

In addition, this presentation contains financial and other information which has been derived from publicly available information disclosed by persons other than Commerzbank ("external data"). In particular, external data has been derived from industry and customer-related data and other calculations taken or derived from industry reports published by third parties, market research reports and commercial publications. Commercial publications generally state that the information they contain has originated from sources assumed to be reliable, but that the accuracy and completeness of such information is not guaranteed and that the calculations contained therein are based on a series of assumptions. The external data has not been independently verified by Commerzbank. Therefore, Commerzbank cannot assume any responsibility for the accuracy of the external data taken or derived from public sources.
